

Slow or no internet?

Why wait months for a fixed-line installation or get locked into a long-term contract for a temporary site? Fixed Wireless Access delivers high-speed connectivity from day one, setting the foundations for reliable connectivity that ensures maximum productivity.

Fast, reliable, enterprise-grade 5G cellular connectivity.

Fixed Wireless Access (FWA)

FWA is a fast-to-deploy and flexible-to-install solution for businesses that need day one connectivity. It supports enterprise applications and remote work, enhancing business operations with scalable and secure internet access.

How it works

Our fully-managed service is designed to maximise and maintain uptime. You'll liaise with one of our expert Solutions Engineers to ascertain that FWA is the best fit for your business requirements. This is installed by one of our highly-qualified, in-house Field Technicians, securing the best possible connection and speeds.

We then handover to our in-house Network Operations Centre, where our analysts will continually monitor and optimise your network across all your locations, finding and fixing issues before they reach you.

Here's what you'll benefit from:

- ✓ **Rapid connectivity**
 We'll install within 10 days, faster than any fixed-line provider, connecting you from day one.
- ✓ **Enterprise-grade security**
 Rely on routers with enterprise-grade security built in, providing a rich security posture based on Zero trust.
- ✓ **Fastest speeds, unlimited data**
 Benefit from a 5G router with SLA-backed performance. Minimum speed guarantees of 10 Mbps and above.
- ✓ **Multi-network assurance**
 Coverage is provided by multiple networks, so you're not tied to a single operator.
- ✓ **A failover solution**
 5G FWA acts as a strong secondary connection once fibre or other infrastructure is installed.
- ✓ **Flexible contracts**
 No long-term commitments, so you're not tied into a contract for longer than you need.
