

Wi-Fi

Wi-Fi deployments can be expensive, time consuming and difficult to manage. When it doesn't work properly, the calls to support start rolling in. From network design to deployment, our zero-touch configuration Wi-Fi service will have your business and users up and running in no time, no matter your circumstances.

What's it all about?

Fast, reliable Wi-Fi is no longer optional, it's essential. Keep your customers connected and your business running smoothly with a wireless network designed for performance and reliability, providing the foundation to scale technology with confidence.

Fully managed Wi-Fi that works

Our approach to Wi-Fi takes the headaches away. It starts with our expert Solutions Engineers who conduct a professional pre-installation survey. They'll create a comprehensive plan to ensure strong performance and the best possible coverage from day one.

Our in-house Field Technicians handle the installation, and once a post-install validation survey is complete, our 24/7 Network Operations Centre takes over, where our analysts continuously monitor and optimise Wi-Fi across your locations.

- ✔ **Visibility from anywhere**
A single pane-of-glass view of your WLANs, connected APs and clients across multiple sites. View real-time and historical data on applications, traffic, clients and more.
- ✔ **Comprehensive coverage**
The latest Wi-Fi standards paired with a complete pre-installation survey by our Ekahau certified engineers guarantees no more Wi-Fi dead zones.
- ✔ **Zero-IT activation**
Take the hassle out of traditional set ups and self-activate devices for secure access to your wireless networks.
- ✔ **Trusted vendors**
We partner with leading vendors, including Ruckus Commscope, Cisco Meraki, Cambium Networks, Fortinet and more. Combined with our fully-managed service, we guarantee Wi-Fi that performs.
